

Red Bull's AlphaTauri F1 Team Races Off In New HondaJet Elite

Powering their Red Bull sponsored F1 team with engines and engineering from Honda, it was only natural for Scuderia AlphaTauri to insist on flying a HondaJet Elite.

That AlphaTauri dream was realized a few days ago when the team took possession of their brand new HondaJet Elite. After the very light jet's arrival at RAS Headquarters at Mönchengladbach Airport in Germany, we provided the Red Bull crew with expert HondaJet pilot base training.

It was an exciting time, watching the Flying Bulls welcome their custom painted aircraft – another impressive jet joining the growing European fleet of new HondaJets.

Their next destination was Red Bull's famous Hangar-7 in Salzburg, Austria. As aviation enthusiasts well know, Hangar-7 is home to a prized collection of unique airplanes and helicopters – some of the greatest aircraft in aviation history.

"We are pleased to be able to welcome a new member to the Flying Bulls fleet with the HondaJet HA-420 Elite," stated Red Bull during the official handover at RAS Headquarters. "This marks another step in the great cooperation between Honda and Red Bull."

Jet turbine engineers from Honda Aircraft collaborated on turbocharger improvements in the latest Spec 3 engine upgrade to Red Bull's F1 race car. Both the car and jet share other engineering similarities, such as advanced aerodynamics, carbon composite construction, and fuel efficiency.

"The HondaJet is ideal because it is particularly efficient on short and medium-distance routes. It will be used by Red Bull Racing and Scuderia AlphaTauri as part of our Formula 1 cooperation," the Red Bull statement continued. "The success of this global partnership between Honda and Red Bull has also been shown in MotoGP for many years."

About HondaJet Europe

HondaJet Europe, alias Rheinland Air Service (RAS), is the exclusive European dealer and authorized service center for HondaJet aircraft, including the new HondaJet Elite. The revolutionary Elite sets the new standard for private jets, offering a remarkable balance of innovation and inspiration. Aerodynamic advancements, such as its Over-The-Wing Engine Mount and Natural Laminar Flow fuselage, let the HondaJet Elite fly farther, faster, and more fuel efficiently. HondaJet Europe offers HondaJet sales, and approved pilot training, as well as EASA and FAA certified HondaJet service. www.hondajet.eu
